

Claims

1. A medicament based on antibodies and distinguished by the presence of an activated form of monoclonal, polyclonal, or natural antibodies to interferon in low or ultra-low doses, the activated form being produced by multiple consecutive dilutions and exposure to external factors, preferably in accordance with homeopathic technology.
2. A medicament according to Claim 1 distinguished by obtaining antibodies with the use of human or heterologous interferon alpha, beta, or gamma, including recombinant interferon.
3. A medicament according to Claims 1 or 2 characterized by the use of a mixture of various, mostly centesimal, homeopathic dilutions.
4. A method of treating a pathologic syndrome, whose formation is affected by interferon, distinguished by administering activated forms of antibodies raised to interferon alpha, beta, or gamma in low or ultra-low doses and obtained by multiple consecutive dilutions and exposure to external factors.
5. A method of treating a pathologic syndrome according to Claim 4 distinguished by the use of a mixture of various homeopathic dilutions.
